Should you choose conventional cancer treatments!

Diagnosed with cancer sends panic or fear through the mind of the individual who receives the drastic news, it also has an effect on friends, relatives, and his or her family and anyone associated.

This year 569,480 Americans are expected to die from cancer in the US cancer accounts for one of every four deaths. According to the American Cancer Society, cancer fact and figures, 2010.

Cancer seems to have become an epidemic and is only second in death to heart disease. Cancer has become the top killer of Americans under the age of 85 years of age. .

The real war on cancer began when then former president Richard Nixon in 1971 appropriated \$100 million to fund a cure for cancer, but the major pharmaceutical companies got the bulk of the money in which no cure was provided, the American consumer lost out in a major way, no cancer cure has been found. When closely examined chemotherapy has been a failure in waging this massive war on cancer and has led to an 8% increase in deaths, the New York Times, September 30, 1994. In this article cancer tops heart disease as top killer, it reported that the cancer experts were telling Congress the war on cancer has stalled and if changes were not put in place there would be an epidemic on our hands, 2010 it has happened one in eight Americans are diagnosed with cancer every day. When given chemotherapy it does not work. The health care industry uses a five years survival rate but makes \$50 billion yearly in profit. The sad part to justify the chemotherapy lifeline they use a five-year survival rate as a cancer cure rate. Those living past that rate is considered a success by the pharmaceutical giants, any death passed that point doesn't really matter anymore. Why because your doctor are paid to enlist their cancer patients into chemotherapy program, which encourages early diagnosis which ensure very expensive chemotherapy. The truth of the matter the drug survives the patient dies miserably and slowly with pain.

When it comes to chemotherapy cancer cells are killed along with good cancer cells.

Cancer is a group of disease characterized growth and spread of abnormal cells. If the spread is not controlled it can result in death. Cancer accounts for more deaths annually than aids, malaria and tuberculosis combined. When understanding cancer. There are two very important components, one deal with stress and other deals with nutritional. There is mounting evidence that stress may be one of the major culprits of cancer causing factors to our health. These findings confirm that the immune system is often suppressed in those people

who have no sense of personal choice to change the negative conditions of their lives. Research conducted by the University of Pennsylvania Shows that it is not stress per se, but more particularly stress that is perceived as inevitable and uncontrollable that is likely to be the key factor in vulnerability to cancer.

In his book the China study Dr. T Colin Campbell, PhD, states that a majority of our cancer diseases is related to our diet of animal-based fat and protein in which he pointed out in his book. If we were to eat a plant-based diet most all cancers would not have an opportunity to form or invade our bodies. There's enough evidence that doctors should be discussing the opinion of pursuing dietary changes as a potential path to cancer prevention and treatment, and if these were made possible. According to Dr. Campbell that fewer than 500,000 people would go to the doctor's office and be told they have don't have any form of cancer, such as breast, prostate or large bowel. So you might ask what is the solution, well it has to be a nutrition-based plant-based diet. Cancer doesn't have to be a death sentence but it's a systematic disease that needs to be addressed systematically when it comes to cancer treatments. Educate yourself before making treatment choices and rather than focus on the state of conventional cancer treatments a cancer patient today need to become educated about cancer and the treatment options available. Remember to eat your vegetables and drink plenty of water and live a stress-free life. Whatever you decide do it under the care of a healthcare practitioner who supports your decisions. Your doctor should also respect your decision. Cancer patients deserve not only compassion, but also the freedom to choose nutritional chemotherapy as the first line of defense against cancer, rather than forced into conventional method of treatments.

Pharmaceutical Cancer Treatments: Are They Your Only Choice?

A cancer diagnosis sends panic or fear through the mind of the individual who receives this unthinkable news that also affects their friends and family. This year, 569,480 Americans are expected to die from cancer in the US. Cancer accounts for one of every four deaths, according to the American Cancer Society's Cancer Facts & Figures, 2010. Cancer seems to have become an epidemic and is only second in death to heart disease. It has become the top killer of Americans under the age of 85. The conventional treatment for cancer is chemotherapy, but does it really work? Is there an alternative to this often painful treatment?

Cancer is a group of diseases characterized by the growth and spread of abnormal cells. If the spread is not controlled, it can result in death. Chemotherapy treatment kills cancerous cells as well as good cells in order to stop the growth and spread. Cancer accounts for more deaths annually than AIDS, malaria and tuberculosis combined. The real war on cancer began in 1971 when former President Richard Nixon appropriated \$100 million to fund a cure for cancer. The major pharmaceutical companies got the bulk of the money for which no cure was provided. The American consumer lost out in a major way.

According to a 1994 article in the New York Times, chemotherapy has been a failure in waging this massive war on cancer and has led to an 8% increase in deaths, surpassing heart disease as a top killer. The article also states that cancer experts told Congress the war on cancer had stalled and if changes were not put into place, there would be an epidemic on our hands.

In 2010, it has happened. One in 8 people are diagnosed with cancer every day in America and chemotherapy has not worked. The sad part is that the health care industry uses a five-year survival rate to justify the chemotherapy lifeline as a cancer cure, but they make \$50 billion in profit from it annually. Those living past that rate are considered a success by the pharmaceutical giants. Any death past that point doesn't really matter anymore. Why? It is because your doctor is paid to enlist their cancer patients in a chemotherapy program. This encourages early diagnosis and ensures very expensive chemotherapy treatments. The truth of the matter is that the drug survives and the patient dies a slow, miserable, and painful death.

There are two very important components you should understand about cancer: stress and nutrition. There is mounting evidence that stress may be one of the major culprits of cancer causing factors to our health. These findings confirm that the immune system is often suppressed in those people who have no sense of personal choice to change the negative conditions of their lives. Research conducted by the University of Pennsylvania shows that the key factor is not specifically stress but the perception of a stress that is inevitable and uncontrollable that leaves us vulnerable to cancer.

In his book, *The China Study*, Dr. T. Colin Campbell points out that a majority of our cancer diseases are related to our diet of animal-based fat and protein. If we were to eat a plant-based diet, most cancers would not have an opportunity to form or invade our bodies. There's enough evidence that doctors should be discussing the pursuit of dietary changes as a potential path to cancer prevention and

treatment. If these were made possible, according to Dr. Campbell, fewer than 500,000 people would go to the doctor's office and be told that they don't have any form of cancer – breast, prostate or large bowel. Now, you might be asking, what is the solution? Well, it has to be a nutritional plant-based diet.

Cancer doesn't have to be a death sentence, but it is a systematic disease that needs to be addressed systematically when it comes to treatment. Educate yourself before making treatment choices. Rather than focusing on conventional cancer treatments, today's cancer patient needs to become educated about their cancer and the treatment options available. Remember to eat your vegetables, drink plenty of water and live a stress-free life. Whatever you decide, do it under the care of a health care practitioner who supports your decisions. It is important that your doctor respects your decisions. Cancer patients deserve not only compassion, but also the freedom to choose nutritional therapy as their first line of defense against cancer rather than being forced into a conventional method of treatment.
